I have imported all basic inbuilt functions in my program which are necessary for the execution of the program.

First it will ask the student credentials for login,if the credentials doesn't match it'll show for the -

"If you need help regarding student credentials,simple type help".

Then it will ask for the help, in that help shows the 'this application should be run with the following command line parameters:

a positive integer, a negative integer or zero.The positive integer cannot be more than 12 or less than -12'.

Then it shows the username and password credentials.

If the credentials matches, it will ask the user to enter the month from -12 to +12.Then it shows the respective month's calendar with current date hightlighted.

if the user gives greater than +12 or lessthan -12 , it will shows the "invalid input".

Thank you:)
